Subject: RE: Supplemental comments regarding Gunnison Copper Project Class III Draft Underground Injection Control Permit

Dear Ms. Rumrill,

Due to the short time to comment and the lack of an EIS for background-my comments will be brief.

1. Difficulty in control of the drift of the pregnant solution in the drinking water horizon. Once the horizon is contaminated, it will be unusable as drinking water.
2. Leaching of harmful and carcinogenic materials into the pregnant solution and thence into the drinking water horizon.
3. Migration of the pregnant solution to the surface through evaporation and spills.

This is a unique area of Arizona that needs to be protected.

Duncan Creed Engr Mines

Mr. Duncan Creed
